

Shaan Subbaiah . B.C

1. Creating a multiple router topology by connecting routers through serial ports and PC's through fast ethernet
2. Assigning ip addresses.
3. pinging PC1 from PC0 gives 'dest. host unavailable'.
4. Use 'show ip route' then add static addresses using 'ip route <dest.> <subnet> <next hop>' in privileged configure mode.
5. pinging PC0 to PC1, vice versa works.
